FOR IMMEDIATE RELEASE

***PowerLab Control Technologies, a Han-Tek Company,
Completes Unique Project for Law Enforcement Detention Center***

WELCOME, N.C., September 22, 2011 — PowerLab Control Technologies, a division of Han-Tek, Inc., recently completed a complex re-wire of the Lock & Control system at the 11- floor Law Enforcement Detention Center in Forsyth County, North Carolina.

“Lock & Control is the most important function of the Detention center,” said Captain Stewart Yale, Forsyth County Sherriff’s Office. “Our doors need to stay locked at all times. PowerLab was able to keep our old system operating while installing the new system to assure that we were secure. I can’t say enough about the precision and work ethic of this company.”

The new M340 System is a fiber optic system with an Ethernet backbone. It will not require as much maintenance as the Detention Center’s old system and will not be as vulnerable to downtime due to power surges or other problems. The system operates locks and doors, intercoms, PA systems and lighting controls throughout the 400,000 square foot building which holds 1016 inmates. The installation process was done floor by floor in the Center. As each floor was re-wired, inmates were moved to other floors for increased security.

In addition to cell floors, the project includes ancillary services, the medical intake area and master control. The center's fire control system also had to be integrated into the new security system.

“This was a large-scale security-based project,” said Bobby Cole, Controls Division Manager of PowerLab, “and the largest I/O project we have completed to date. We were able to use the same methods that have been successful for us in just about every other industry and we are proud of the results.”

According to Captain Yale the success of the project was possible due to the close collaboration between everyone who worked on it. “We had all the right teams on this project,” said Captain Yale. “The installation process was safe and meticulous. The result is a new, cost-efficient system that will assure increased security and ease of operation at the Detention Center.”

About PowerLab Control Technologies

PowerLab Control Technologies (www.powerlabcontrols.com) is an industrial systems integrator that offers motion system design and control, robotics system support, PLC and PAC programming and panel building. PowerLab focuses on the plastics, wastewater and aggregate markets, as well as chemical and press applications. The company is located in Welcome, N.C.

About Han-Tek, Inc.

Hantek, Inc. (www.han-tek.com), customizes advanced automation technology to optimize manufacturing-assembly and product distribution systems. Founded in 1961, the company specializes in automation and integrated materials handling systems with a concentration on overhead cranes, conveyors, controls, robotics and automation. Han-tek is based in Victor, N.Y., a suburb of Rochester.
